TS DataServer™ for MariaDB Quick Start

Introduction

To install TS DataServer for MariaDB, follow these quick and easy steps. Approximately 2 MB is required on the server system.

Installation

Installations are accomplished using cpio. Before using cpio, the downloaded product file must be moved onto your system.

1. Login as **root**
2. Copy the downloaded product file into /usr/lib/basic.
3. **cd /usr/lib/basic**
4. **umask 0**
5. **cpio -ivBmud < TSMDB**
6. **./install**

Getting Started

1. Login as the MariaDB administrator.
2. After the MariaDB database is up and running, execute **tsmariadb**.

Configuring Clients

1. Update SERVER.MAP with Server IDs and TCP/IP addresses.
2. Add Dev line to IPLINPUT using the MariaDB Server ID found in SERVER.MAP
3. Update the Dictionary-IV™ Link Definitions by adding the Server ID and Table Names.
