WebWorkshop™

Imagine harnessing decades of vertical market expertise and proven business logic and turning it into modern, cloud-powered web applications that run seamlessly on desktops, smartphones, tablets and any device with a browser. Today, we're excited to introduce WebWorkshop: the ultimate software development platform that enables you to take your existing Thoroughbred Software and build stunning web interfaces, highly interactive forms and grids, and fully customizable dashboards.

WebWorkshop brings together the best of your vertical market expertise and business applications with today's web technology. By leveraging our commitment to Dictionary-IV definitions, Report-IV definitions, Script-IV and Business Basic coded business rules, WebWorkshop empowers you to build applications that preserve your trusted systems while offering a fresh, intuitive user experience. Here are some of the essential features our latest product delivers:

- Advanced Reporting & Chaining – Run simple reports or set up comprehensive parameter-driven reports complete with multi-report chaining capabilities. Customize your report parameters on the fly using a full-featured parameter screen so that you can generate everything from detailed transaction listings to high-level financial summaries in seconds.
- Seamless Integration & Customization – Tap into the power of your existing business system without re-inventing the wheel. WebWorkshop leverages your well-honed Dictionary-IV objects and extends them with additional capabilities such as streamlined post-process operations, API-based autocomplete, and next-generation data formatting. Whether you're integrating progress update messages, file upload modules, or additional custom business rules, WebWorkshop is built to work with what you already trust.
- Fully Responsive & Cross-Platform – In today's fast-paced environment, you need an application that works anywhere. WebWorkshop is optimized for desktops, smartphones, tablets, and any device with a web browser, ensuring that your apps are always accessible to your end-users.
- Powerful Editors for Forms & Grids – Our cutting-edge Form and Grid Editors give developers the freedom to adjust layouts, group related fields, modify button properties, and reset or lock in changes so your customizations stay in place across rebuilds. Enjoy granular control over every aspect of your application's look and functionality without ever having to leave the web interface.

WebWorkshop is more than just a development tool—it's your bridge to the future of web applications. It unlocks your current 3GL and 4GL code, enhances your existing systems, and offers a versatile, scalable solution designed with you in mind. This is your chance to take full control of your business logic and seamlessly adapt it to the rapidly evolving digital landscape.

Are you ready to see WebWorkshop in action? Check out our introduction video here or respond directly to this email:
