## Thoroughbred Cloud Services now Includes DataSafeGuard™

Along with all Thoroughbred Cloud features, DataSafeGuard (DSG) will now be the primary backup for Cloud Hosted Systems. DataSafeGuard is a transaction backup system offering up-to-date processing of backed up data.

Detailed information including Who, What, Where, and When for each transaction is recorded as changes occur to your database.

In the event of a system failure or breach, database transactions can be analyzed and played back to restore the system to its last good state. DSG can replicate specified data to a backup system or database to provide a "hot" swap or redundant/mirrored backup. DSG can also replicate your data to other databases including MS SQL Server, MySQL, and ORACLE as well.

Thoroughbred keeps your business Running Better!.
