VIP 8.6.0 Upgrade Note

When upgrading to VIP 8.6.0 on a client machine and connecting to an 8.6.0 host for the first time, you may see the following error message:

```
"Rename failed can't create a file when that file already exists.
Language pool not fully integrated."
```

This error message will only display the first time VIP is enabled and can safely be ignored.

To Avoid This Error Message

After installing VIP 8.6.0 open the \Tsi\MessagePool\ folder and delete all files in the MessagePool folder.

This forces the current message pool file to be downloaded from the host the next time VIP is enabled.
